Corporate Polling

In addition to being a file management tool, V7 Archive Agent can also be a corporate polling solution. With V7 Polling, Archive Agent, and an Internet connection, individual site locations can send report data back to a corporate location on a daily, weekly, or monthly basis.

On the corporate side, there should be a viewing copy of V7 Polling and a corporate copy of V7 Archive Agent.

Configuring the system is simple. V7 Polling should be setup to poll the individual site's registers on a regular basis. Next, V7 Archive Agent can be configured to email all the polled report files to a corporate location. To configure Archive Agent to send e-mail messages see the [Setup Menu](#) topic.

When the files arrive at the corporate office, the attachments should be saved on a computer that has V7 Polling and Archive Agent installed. Next, open Archive Agent and merge the e-mailed archives into V7 Polling. Learn how to merge data, see the [Merge Menu](#) topic.

In addition to transferring report data, any of the V7 Archive Agent archives can be emailed to a corporate location or from a corporate location. For example, a corporation could update a PLU/UPC file at their office and email that archived file to each of the individual locations. Then the individual sites could use Archive Agent's PLU/UPC restore option to update their V7 Polling software. Lastly, the file can be sent to the register through a previously scheduled V7 Polling calendar program send.
